EDUCATION

Texas A&M University

Aug. 2025 – May 2028

B.S. Industrial Systems Engineering (Honors), Minor in Statistics | GPA: 3.7

College Station, TX

Coursework: C++ Design, Engineering Calculus III, Python Programming

Organizations: EDGE, FREE, Aggies Create, Product@TAMU, IEEE, Aggie Data Science Club, Aggie Innovators

EXPERIENCE

System Dynamics Research | *Undergraduate Researcher*

Jan. 2026 – Present

Texas A&M University

College Station, TX

- Developing **system dynamic models** in **Vensim** using stock-and-flow diagrams and feedback loops to stress-test the **WEF nexus framework**; presented findings at TAMU Student Research Week.
- Engineered ML pipelines (**XGBoost**, **Random Forest**) with **SHAP explainability** to find critical efficiency metrics like **DMI** and water intake, further validating the WEF nexus.

AI Cybersecurity Research | *Undergraduate Researcher*

Jun. 2025 – Dec. 2025

Texas A&M University

College Station, TX

- Conducted cybersecurity research under Dr. Jeff Huang, published technical findings to broader audiences and produced in-depth case studies on malware detection pipelines and secure **software architectures**.
- Researched **LLM** and **ML** applications in malware detection to enhance autonomous vulnerability discovery, threat response, and scalable security automation.

PROJECTS

ClinicalHours | *Co-Founder*

Dec. 2025 – Present

- Scaling a two-sided marketplace for pre-med clinical opportunities; secured funding/recognition through the **McFerrin Ideas Challenge (Finalist)** and **Good Bull Pitch competition (3rd place)**.
- Leading the **end-to-end product strategy, business execution, and outreach**, growing user base to **200+ students** and securing initial clinical partnership; invited to join **Meloy Kickstart Accelerator**.

Celvio | *Wearable NMES Device — MedXplore Competition*

Feb. 2026

- Led **business plan and financial model** development for medical device competition, conducted market analysis of **\$382M** NMES segment, competitive positioning, and detailed cost breakdown, achieving **\$45 COGS** target.
- Developed a wearable NMES device for MedXplore competition, including **PCB** layout, pulse generator **circuitry**, and power management system for safe, medical-grade muscle stimulation.

FinSeek | *Fraud Detection Platform — TAMUHack (Capital One Challenge)*

Jan. 2026

- Engineered fraud detection platform with **3-model ensemble ML (Logistic Regression, Isolation Forest, and LightGBM)** achieving 95%+ precision via 2-of-3 voting consensus for **TAMUHack's Capital One** challenge.
- Analyzed **200k+** PaySim transactional dataset to optimize **Logistic Regression** coefficients with transaction-type weights and tuned ensemble thresholds, reducing false positives by **99%**.

Persona | *Digital Identity Platform — 2nd Place @ Product@TAMU Ideathon*

Nov. 2025

- Led development and design of Persona, a digital identity platform during Product@TAMU's 24-hour Ideathon, collaborated with a multidisciplinary team to develop prototype, pitch deck, and video pitch to **earn 2nd place**.

AWARDS

Good Bull Pitch Competition | *3rd Place*

March 2026

Texas A&M Ideas Challenge | *Finalist*

March 2026

Product@TAMU Ideathon | *2nd Place*

November 2025

SKILLS

ML & Modeling: XGBoost, LightGBM, LSTM, SHAP, Scikit-learn, Vensim

Data & Research: Python, SQL, Pandas, ARIMA/SARIMA, Literature Review, Technical Writing

Tools: Git, Figma, Docker, Arduino, Fusion360
